#### Sustainability: the way forward for Business

Dr Xenia I. Loizidou 25 April 2024

# Where do you come from???

# Which is the area of your work/studies

### The framework

What knowledge?

### Some facts

- The Mediterranean region is an important climate change hotspot due to pronounced warming and drying projected under future greenhouse gas emission scenarios (IPPCC 2022)
- Mean temperature rise: 1.4 degrees Celsius since 19th century
- The Mediterranean region is warming 20% faster than the global average (UNEP 2022).
- The Mediterranean Sea has been identified as the most polluted sea in Europe (Gerigny et al., 2019)

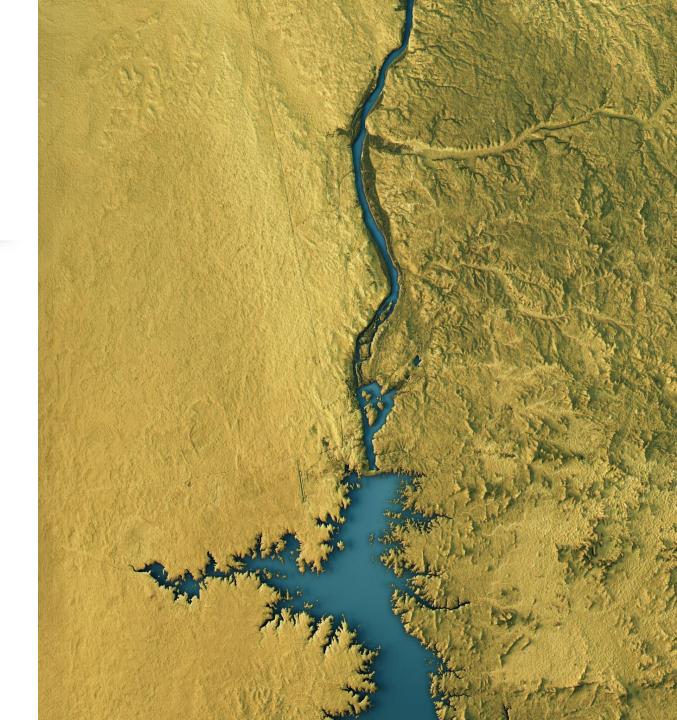

### Some more facts

- Mediterranean is the most affected sea by marine litter worldwide (Fossi et al., 2018).
- A recent report estimates that the plastic stock accumulated in the Mediterranean Sea is around 1.2 million tonnes (Boucher and Bilard, 2020).
- more than 400 million of international tourists arrivals – 30% of international tourism (2019, ITA)
- 21 countries bordering the Mediterranean. About 529 million: 205 million live on the northern shore and 324 on the southern and eastern shore (UN, 2020)

#### Challenges from climate crisis environmental-social- economic

- SLR lagoons, islands, estuaries
- Extreme weather conditions
- Water scarcity
- Erosion (land and coastal)
- Pollution
- Ecosystem degradation/destruction
- Climate refugees
- Economic impacts
- Expensive regulations for GHG control/minimization
- Food crisis
- Energy
- •

### Extreme weather conditions

#### Integrated approach

there is no more such approach as.... *business* as usual

#### the curse of URGENT

- E.g. Energy poverty is a result of a long- standing neglect of what is coming! renewables- just sun? What else?
- Climate change is part of the development model of our countries?

### 

• Nicosia upgrading!

### (EU taxonomy)

# Delegated ACT BY EU: 21 November 2023

a cornerstone of the EU's sustainable finance framework and an

important market transparency tool. It helps direct investments to the economic activities most needed for the transition, in line with the European Green Deal objectives.

### Benchmarks

Banks can identify environmental risk and adapt the terms of the loans accordingly

# Green Claims Directive (Greenwashing Directive)

TOO GREEN TO BE TRUE? 5 WAYS TO IDENTIFY GREENWASHING

January 2024: approved by EU parliament

Every claim has to be validated based on numbers/ validated data

No more, Zero Waste, Net Zero etc

# Change the way we deal with – opportunities?

- Production
- Waste management
- Urban planning concrete cities
- Coastal Zone Management
- Agricultural practices
- Conservation areas
- Industry Circular Economy
- Energy Energy poverty –Net Zero/ Fit for 55

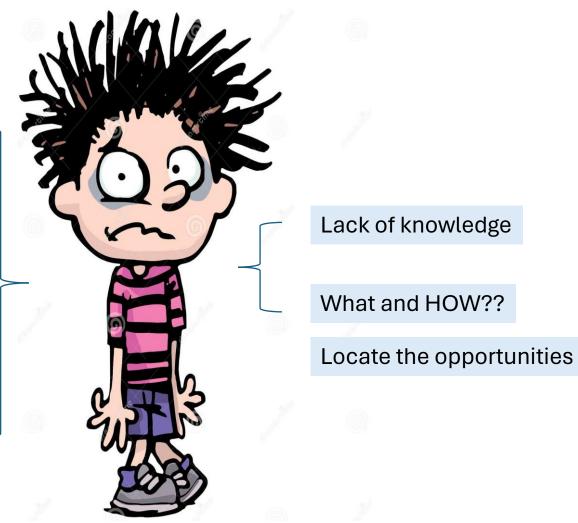

- Waste Management
- Urban development and cement
- Carbon captures/sequestration/ removal GHGs
- Best agricultural practices
- Sustainable industry
- sustainable tourism
- .... SKY IS THE LIMIT

# MARKET PUSH

### The example of booking.com

#### Booking is changing its Travel Sustainable filter

by Harold Goodwin

Director of the Responsible Tourism Partnership

Booking.com ends sustainability program under pressure from ACM

25 March 2024 door Theo de Reus

# Booking.com takes 'Travel Sustainable' program offline following ACM action

"Booking.com is taking action and that it is working on an improved program based on third-party certification and which is aimed at making accommodations more sustainable." All claims must be VALIDATED.

### HOW TO PROCEED???

Engage into the green shift!

### Be sustainable

STRATEGY

## Climate Change Is a \$26 Trillion Growth Opportunity. 5 Business Models to Consider Today

Shifting to a low-carbon economy in 5 key areas could create huge financial benefits and 65 million new jobs.

in f 🍠

Clean energy systems. good urban planning and infrastructure investment, " Sustainable land use. More sustainable agriculture and forest protection can improve food security

Wise water management. New technology and better management can help allocate resources,
A circular industrial economy. We need to move away from a take - make - waste economy

"More compact, connected, and coordinated cities are worth up to \$17 trillion in economic savings by 2050 and will stimulate economic growth by improving access to jobs and housing". *"Unlocking the Inclusive Growth Story of the 21st Century,"* 

### ECONOMY ENVIRONMENT SOCIETY

::

#### Circular economy

#### The Beer and the cookies

Waste: Barley

Synergy: raw material for Health bars – cookies!

GLOBAL MARKET IS EXPECTED TO REACH US\$ 2.6 Bn BY 2026 GROWING AT A CAGR OF 11.10%

#### Marine technologies

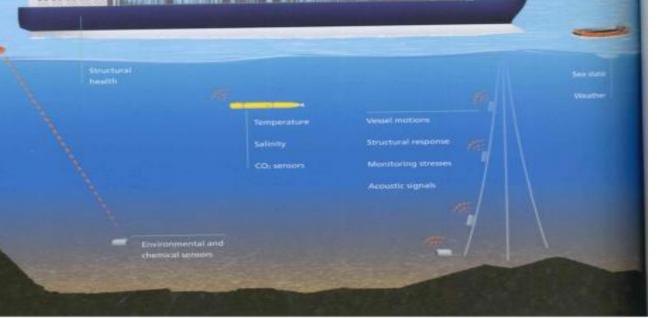

#### Sensors and Communications

Onboard control station

Use of a wide variety of sensors capable of communicating data in real time via satellites and land- and ocean-based networks will revolutionise the way information is handled in the ocean space. As increasingly complex data is obtained more cheaply, advanced interpretation techniques, such as big data analytics, will thrive. This will allow decisions to be made in an informed manner, improving safety, efficiency, and minimising environmental impact across all aspects of human prevenues in the ocean space.

9

For an offshore structure, such as a floating production and storage and offloading (FPSO) facility, sensors would measure flow rates, pressure and chemical composition at various processing stages, wave motions, mooring and hull girder deformation and stress, local weather and current conditions, as well as properties of the seabed and seawater around the operation. The information would either be gathered in an onboard control station, allowing onsite decisions to be made, or transmitted via satellities to onshore data centres for storage and analysis, providing global overview of all assets.

# Algae

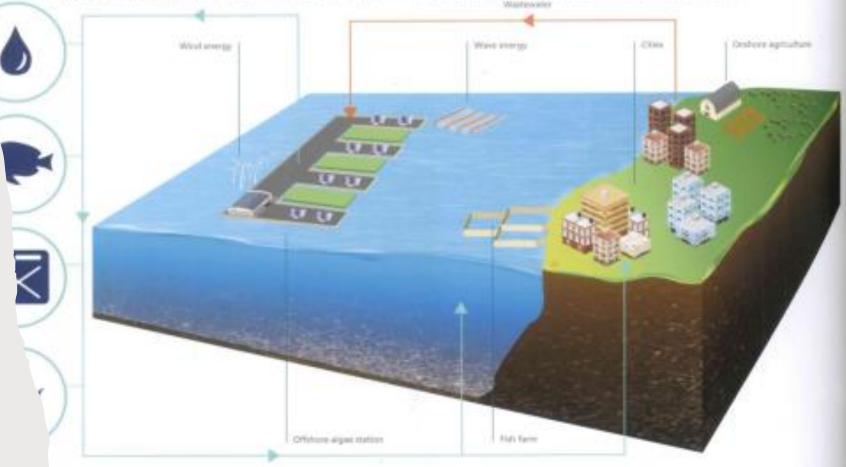

More than 1 million algae

More than 15,000 chemical substances have been identified in algae

Algae for energy

#### Marine Biotechnology

This technology is based around harvesting and nurturing marine biological resources in an offshore algae station. This will reduce pollution by consuming wastewater from onshore factories, farms and households. At the same time, the algae produced will then be used for food, biofuel, fertilisers, pharmaceuticals, and connetics production. The energy required to run the facility will be harvested from waves, surrays, and wind. Algae will be grown without using fresh water and agricultural land, which is needed for conventional food production.

Key facts about the implementation of 'Tiganokinisi' programme in Cyprus

# GENDER

# What's the connection between climate change and gender?

in 🗹 回

www.ecoltdgroup.com

### Gender issues

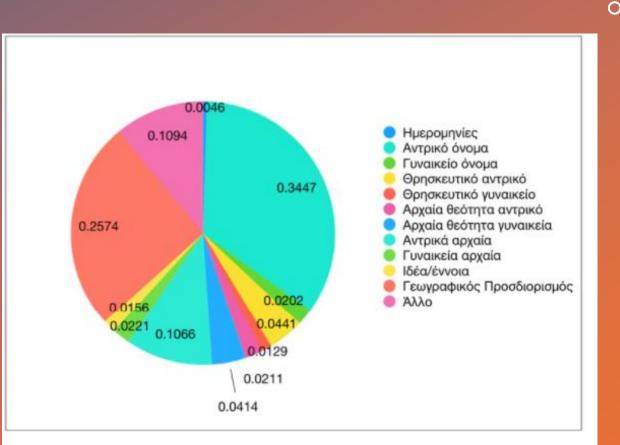

# STEM UP!

and the second second

Cyprus (Gender Equality Index 2019)

who study STEAM?: 40% women who works in STEAM?: 4% women

The proportions of both women and men (27%) working in STEAM occupations in Cyprus are among the lowest in the EU.

The EU policy framework of the European Green Deal and other relevant policy (the EU Gender Equality Strategy 2020-2025 and the Recovery and Resilience Facility) puts forward ambitions to incorporate gender and intersecting (in)equalities goals in the green transition, but specific gender measures and systematic gender mainstreaming could be strengthened.

Mapping sexism – AKTI eg Larnaka 1088 streets, 2% have a woman's name, 34,5% a man name!

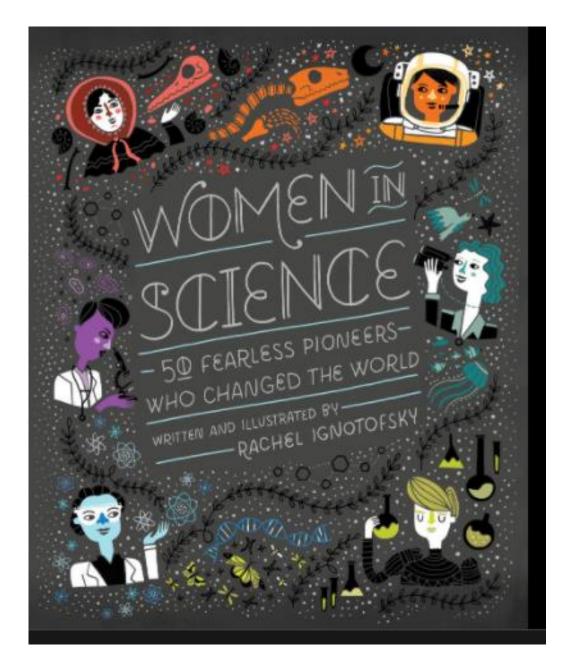

• Male-Dominated Cultures: Because fewer women work in STEAM, and even less are part of Cypriot decision- making system, these fields tend to adjust to male-dominated cultures that are not supportive of or attractive to women.

• So green transition becomes another male dominated area unless we act NOW

#### **Fewer Role Models:**

girls have fewer role models to inspire their interest in these fields, seeing limited examples of female scientists and engineers in books, media and popular culture. There are even fewer role models of Black women in math and science.

anything to do with ....

# Cyprus ranks last in innovation among EU countries

mindset?

• Which is the major gap/need to proceed towards a sustainable business model?

2. Which is a solution to address the major gap/need to proceed towards a sustainable business model?
